

Matt Laughlin

full-stack software engineer

website • github • linkedin • hi@mattlaughlin

Skills

Front End

React • HTML • JSX • CSS • SCSS

Back End

Node • Express • Javascript
Typescript

API

REST • GraphQL

Database

SQL • NoSQL

AWS

Amplify • Lambda • RDS • DynamoDB
CloudFormation • CloudPipeline
CloudFront • CloudWatch • CDK • SDK
S3 • API Gateway • Route 53
Secrets Manager • IAM • KMS • VPC

External APIs

Forest Admin • Zapier • Customer IO
ClickUp • Asana

Experience

Filmsupply • Musicbed

Jan. 2020 - Present

- Spearheaded and implemented the development and continual maintenance of a full-stack application for Filmsupply's content department. // Back End: SQL relational database, Node/Express API, Node/Express service built behind a Forest Admin application // Front End: React with CRUD functionality.
- Delivers continued architecture improvements for services within AWS. // Back End: Express services built on a serverless Lambda, accessed through API Gateway // Front End: Amplify App. Architecture is deployed through CDK and Serverless written within the services.
- Contributor of 5+ repositories, weekly. Responsible for architecture support, front end and back end stories in React, Node/Express and Javascript/Typescript within a given sprint.
- Maintains integrity with third party APIs, improving the current codebases with refactoring strategies. Contributes to the transition of legacy monolithic architecture to microservices.
